

Case study

Home & Extensions

With so many homes across the country having flat roofs why have traditional flat roofing materials failed to provide homeowners with lasting solutions for keeping the weather out? Modern home improvement products require little or no maintenance and provide long lasting finishes, so why should a flat roof be any different?

It does not have to be this way; throughout the UK, thousands of homeowners have invested in a Sarnafil Roof Assured flat roof solution, benefiting from a long-lasting low maintenance product on their home or extension.

Most new extensions benefit from PVC windows, conservatories and roofline, all of which require little or no maintenance. Sarnafil roof membranes provide the same benefit, that's why the long-lasting Sarnafil product has become so popular. The result is to make the complete extension a low maintenance value-added addition to the home. For existing extensions, many homeowners have decided to invest in the same long-term flat roof solution,

eliminating the need for periodic maintenance.

A Sarnafil Roof Assured roof can be designed to improve drainage and/or enhance levels of insulation; reducing heat loss and lower expensive heating bills. So if you want a product that not only provides lasting performance and improved energy efficiency then speak to your local Sarnafil Roof Assured Registered Installer, it may also help you gain a better rating under government's Home Information Packs (HIP's).

This is just one of a number of applications for Sarnafil's flat roofing system aimed at the homeowner, providing lasting solutions that have a BBA certified life expectancy in excess of 40 years. Sarnafil Roof Assured Registered Installers are involved in extensions, dormers, porches, garages, roof terraces, balconies, orangeries and in many other home improvement areas. Our solutions also make a positive impact on the Home Improvement Packs (HIPs).

Project

Installation of an insulated flat roof solution to an extension, Harbourne, West Midlands, UK.

Roofing Assured Contractor

Company: SW Roofing Solutions
Contractors: Andy Collier

Description of Works

Design and installation of an insulated flat roof solution to an extension, used as valuable extra living space. Effective drainage and edge detail had to be considered in the installation process.

Project Timeline

Strip existing roof – 1 day
Sarnafil single ply membrane roof – 2 day

Homeowner Comments

"Our existing flat roof was failing and we wanted improved insulation as we used the room as an all-year round living area. The extension is now noticeably warmer and feels like part of the house and not just an add on."
